Not

Figure 1: Not Image

NOT provides inversion functionality, either as a waveform or as CV.

NOT has one IN input, and a single OUT output, as well as a type selection. Types vary the functionality of the module: *CV* offers a binary (on/off) output. When the input is 1.7 or above, 1.7 is output, otherwise 0 is output. When *V/OCT* is selected, the inverse is output; an input of 3.4 outputs -3.4, and an input of -1.8 outputs 1.8.
